Fraser Fir

Douglas Fir

Corkbark Fir

Serbian Spruce

Engelmann Spruce

White Pine

Austrian Pine

EVERGREEN TREES

SPECIES	SIZES / AVAILABILITY
DOUGLAS FIR	7'-9' / 200 TREES
FRASER FIR	7'-9' / 200 TREES
CORKBARK FIR	7'-9' / 100 TREES
ENGLEMANN SPRUCE	7'-9' / 100 TREES
SERBIAN SPRUCE	7'-9' / 300 TREES
WHITE PINE	8'-10' / 100 TREES
AUSTRIAN PINE	8'-10' / 100 TREES

The above evergreen trees are great for planting in full sun or partial shade. They also make a great accent tree or to use for privacy screening.

DECIDUOUS TREES

SPECIES	SIZES / AVAILABILITY
RIVER BIRCH	2"-3" cal. / 200 TREES
GREEN ASH	1.5"- 2.5" cal. / 200 TREES

The above deciduous trees are great for planting in full sun or moist areas. Birch looks nice alone and in clusters. Ash take to drier areas. Both do well in narrow planting locations like parking strips.

River Birch

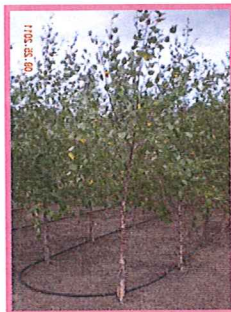

Green Ash

ABOUT OUR TREES

The Greenleaf Tree Farm

was established in 2007 and was originally an alfalfa field; it is located approximately 5 miles southwest of Deer Park, Washington. The soil type is medium to sandy loam and the trees are fertilized one time annually and treated with a systemic soil drench for insect control. The trees are watered with a drip system and they are pruned by a Certified Arborist to maintain a natural look.

Proper Watering

Create a tree well 3' in diameter with a 3" lip and fill it to the top. Trees should be deeply watered with a hose (fill the well around the tree) 2-3 times per week depending on the weather for the first month. Then water 1-2 times each week for the first season.

If you have drip to the tree, water 2-3 times per week for the first month, then 1-2 times per week the first season; all at 3 gallons per session (depends on emitter size). Beware of clay-type soil with poor drainage and call for special direction to avoid "drowning" tree.

Professional Delivery & Planting

Because the trees we have available for the City of Spokane's *Forest Spokane* Residential Tree Program are more mature and larger in size, we require that they are delivered and planted professionally in the fall to ensure that they thrive in their new home. In order to ensure that these mature trees remain healthy after they are planted, we also require that they have designated irrigation in place as well (required for warranty of tree).

Supply, deliver and install mature tree—\$95.00 per tree

****Price listed above is contingent upon there being reasonably easy access to plant each tree (ex. front yard location, not up/down a hillside, etc. Please call if you have questions)***

*****A utilities locate may be required before we can plant; this will result in an additional charge of \$15.00 (one locate covers all trees that are delivered and planted on same day)***
