

Latah Bridge Rehabilitation Study: Public Open House #2

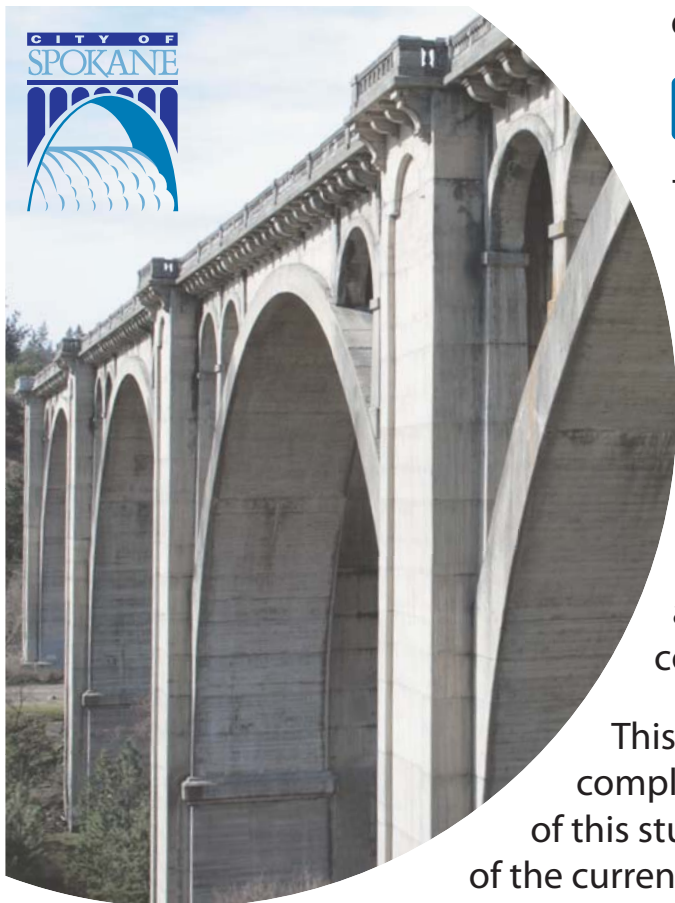

Thursday, April 19, 2012

Thank you for attending the second and final public open house for the Latah Bridge Rehabilitation Study. We appreciate your attendance. Your feedback and questions are important in this process.

Project Overview

The City of Spokane is working with CH2M HILL to develop rehabilitation solutions for the Latah Bridge (also known as Sunset Bridge or High Bridge) to ensure the long-term vitality of the critical link it provides in the region's transportation system. As a part of this study, CH2M HILL performed analysis and inspection of the bridge and is developing options for rehabilitation. Desautel Hege Communications, a local public relations firm, oversaw stakeholder coordination and the public outreach process.

This study began in the fall of 2011 and will be complete later this spring to early summer. The purpose of this study is to provide the City with an understanding of the current condition of the bridge and develop options regarding how to rehabilitate the bridge.

Looking Forward

Once completed, the study will be presented to the Mayor and City Council for their acceptance and direction. The finalized study will allow the City to seek funding for the next steps which include design, acquire any needed right-of-way and construction.
