Review of Key Focus Areas
The North Bank is a vibrant, walkable and truly authentic urban neighborhood with a wide range of housing, complemented by shopping, dining, entertainment and recreation on the Spokane River, and intuitive connections to Downtown and surrounding neighborhoods.
The ratio of jobs to housing units is a measure of the relative concentration of jobs in a place. Countywide, there is a balance of jobs and housing units (1.00) (Figure 11). The City of Spokane is an employment center with a jobs-to-housing-units ratio of 1.24. The North Bank area is a jobs center within Spokane, relative to its importance as a residential area, with a jobs-to-housing-units ratio of 9.21.

The majority (82%) of housing units in the North Bank area are multifamily units that are rented (Figure 10). Only 29% of housing units are multifamily rentals citywide. Of all housing units in the North Bank, 13% are owner-occupied, versus 55% citywide.

DEMOGRAPHIC AND ECONOMIC DATA

The North Bank area has historically attracted residents with lower levels of educational attainment than the City of Spokane and Spokane County (Figure 5). North Bank area residents have not completed high school (16%) at twice the rate of the population citywide (8%). Fewer than half (19%) of North Bank area residents have a college degree (Associate’s or higher) compared to residents across the City (41%) and County (42%).

Household incomes in the North Bank area lag (Figure 6). The median household income for North Bank area households ($20,686) is less than half of the median household income in the City of Spokane ($44,768) and Spokane County ($52,159).

Participants at the March workshop sessions selected the preferred concept as a synthesis that drew on the most important elements of A, B, and C concepts.
Key Focus Areas

Policy

• Encourage the production of a range of housing choices.
• Ensure the North Bank of Downtown continues to support event venues and their patrons by providing needed amenities.
• Improve east-west and north-south connectivity and multimodal circulation to a variety of destinations including Downtown core, neighborhoods, Spokane River gorge, and Riverfront Park.
• Create public spaces and places that make the North Bank a livable Downtown neighborhood and an attractive destination.

Development Standards to support and implement a common vision for the North Bank.

• The concept improves North Bank connectivity to the Downtown core
• The concept provides an appropriate mix of housing types
• The concept sufficiently expands shopping and dining choices
• The concept creates an accessible and safe walkable and bikeable place

Built Form

**Height.** All but the relatively small DTG-70-zoned Monroe Street corridor allow 12-story tall buildings or taller. The DTG zone features a maximum height of 12-stories, but includes bonus incentive provisions that can allow much taller buildings. The bonus incentives are structured into items that allow for two, four, and eight-story bonus increases (which can be combined to further increase the number of stories. The two-story bonus items include land use and design amenities (e.g., ground floor uses that spill onto streets, weather-protection features, alley-enhancements, and water features). The four-story bonus items include a combination of site and building design amenities and workforce housing. The eight-story bonus focuses on two items: (1) Workforce housing, (greater than 50% of units) and (2) bicycle commuter shower facilities. There is no height minimum in either district. Ultimately, these height provisions allow for a level of development that greatly exceeds current conditions – and thus also allow for urban form that has the potential to dramatically change the views and character from the planning area and of the planning area.

**Floor area ratio (FAR) limits.** Existing FAR limits are another notable regulation that shapes the massing and intensity of development in the planning area. The maximum FAR's in the DTG and CB-150 zones are 6.0 and 1.5, respectively. However, the FAR calculations exclude residential development and floor area devoted to parking (thus, primarily apply to office development).

**Minimum setbacks.** There are generally no notable setback requirements for the portion of the DTG zone within the North Bank Planning area except for those setbacks necessary to provide a minimum 12-foot wide sidewalk along streets. Within the CB zone, buildings generally must be no closer than twelve feet from the back of the curb. There are no side or rear setback requirements for either zone (within the North Bank Planning area).

**Maximum site coverage and building width.** The North River Overlay District (which applies to the entire current North Bank Planning area) includes special site coverage and building width standards for
Through-Block Pathways (aka mid-block connections)

Better Town Toolkit
To avoid large blocks, provide mid-block pathways between parcels or through buildings in order to increase access to the neighborhood and to provide an alternative to walking on the street. Lighting and visibility should maximize pedestrian safety and comfort. In order to ensure safety, crosswalks and/or signage should indicate crossings at mid-block. Any public path of the mid-block type should have a minimum width of 18 feet.

2. Mid-block Pedestrian Connections.
   
a. Purpose. Strategic mid-block connections are a key implementation component of the North Bank Subarea Plan intended to:
   
i. Enhance the pedestrian connection between neighborhood uses and to the river.
   
ii. Enhance pedestrian connectivity and circulation in areas with long block lengths.
   
iii. Enhance the development character for neighborhood and residential uses.
   
iv. Break up the massing of large structures and improve internal connectivity.
