

Bluff Restoration Update
June 9, 2017

Bluff Restoration Coming to a Close this Week

Land Expressions expects to complete the Bluff Road Restoration Project today, June 9. Avista will continue to monitor the area weekly through September, and at that time will replace the trees and shrubs that do not survive the summer. The City Parks and Recreation Department will begin monitoring the area in 2018 for five years, per the monitoring plan.

As of today, approximately one mile of the road cut has been restored and replanted with trees and shrubs, and one-half mile of the existing two-track road has been reseeded. All impacts of the restoration were confined to the original road cut.

We appreciate the respect trail users have shown during the restoration, and the cooperation of all the parties involved. We continue to ask the public to be respectful of the private property and to stay off the restored area by using only the existing and/or restored trail system.

This is our final weekly update on the restoration project. The City will provide quarterly updates via email moving forward. The email address BluffRestore@avistacorp.com will continue to be monitored and relevant updates will be made at the city website:
